| | | | | | <u>Daily Take Home</u> Bio-Peptide Serum Vitamin C Serum |

Directions: The facial protocols are listed by steps with the serum listed below the step. The first three steps of the facial are cleansing, exfoliation and extraction steps. Two serums that are used with the hydra device are Salicylic Wash and Skin Deep Prep. The step done in between is an application of a topical, manually applied acid (Pro-gel Glycolic 10% or 30%) Massage for 5 minutes so the acid activates, clients love a facial massage, remove manually not with your hydra device.

The last two steps are the infusion (with your hydra device) of beneficial serums. Ageless Antioxidant Plus is always first, followed by Peptide Infusion, Ageless Growth Factor Infusion or Skin Brightening Plus. The last beneficial serum used depends on which facial you are treating. The last serum, you make one complete pass followed with highlights on the second pass.

Important: Do not dilute serums. It has come to my attention that some device protocols have our serums diluted upon use. Please do not dilute Ageless Serums

Pure Aqua

High Tech Hybrid Aqua

Pure Aqua is the foundation of all our serums

Pure Aqua is a pharmaceutical grade water, meaning the same base water used for medical injections. Pharmaceutical grade water has 8 different categories and is regulated by the United States Pharmacopeia standards. The water that is graded USP Water for injection has gone through an extensive purification process to remove everything but the water. Medical grade water starts with purified water then continues the purification process. The water is twice deionized and reverse-osmosis filtered which removes bacterial endotoxins, colloids, particle matter and microorganisms. Pure Aqua is the purest of waters. Pure Aqua is designed to deeply cleanse while hydrating and soothing the skin. Fight dry skin, wrinkles and aging by hydrating the skin directly. Pure Aqua is ideal for all skin types hydrating indulgence with nature's pure vitality.
