Directions: The facial protocols are listed by steps with the serum listed below the step. The first three steps of the facial are cleansing, exfoliation and extraction steps. Two serums that are used with the hydra device are Salicylic Wash and Skin Deep Prep. The step done in between is an application of a topical, manually applied acid (Pro-gel Glycolic 10% or 30%) Massage for 5 minutes so the acid activates, clients love a facial massage, remove manually not with your hydra device.

The last two steps are the infusion (with your hydra device) of beneficial serums. Ageless Antioxidant

MEDICAL

PURCHASING RESOURCE

Plus is always first, followed by Peptide Infusion, Ageless Growth Factor Infusion or Skin Brightening Plus. The last beneficial serum used depends on which facial you are treating. The last serum, you make one complete pass followed with highlights on the second pass.

Important: Do not dilute serums. It has come to my attention that some device protocols have our serums diluted upon use. Please do not dilute Ageless Serums
