

How to incorporate Renveau Liquid PDO into them. Here's a breakdown:

1. **Micro needling with or without HA glide**: Renveau can be used as a replacement for your usual glide or combined with any HA glide to enhance the procedure's effectiveness.
2. **PRP with micro needling**: Add 1ml of Renveau to 3ml of plasma for longer-lasting results and increased collagen creation, unaffected by PRP viability. The addition of Renveau also provides immediate hydration with its 30% HA content.
3. **Micro needling with RF**: Renveau can be used to promote hydration, rapid regeneration, and prolong results when combined with RF devices. It's particularly beneficial for RF treatments, which are typically done on dry skin.
4. **Aqua gold**: Adding 2ml of Renveau along with 1ml of sterile water to Aqua gold treatments can enhance their effectiveness. Renveau can be used alone or in combination with regular Aqua gold treatments. Remember 1ml = 100 smooth threads .
5. **IPL**: Not recommended to combine with products due to the inability of IPL to push products into the tissue.
6. **Genesis and CO2 treatments**: It's recommended to use Renveau before these treatments for rapid regeneration. Additionally, it can be applied topically after treatment to seal and support tissue regeneration.
7. **Botox**: Renveau can complement Botox treatments by providing hydration and supporting skin regeneration, Botox prolongs Renveau in the system for even more collagen stimulation.

In summary, Renveau Liquid PDO can be integrated into various cosmetic procedures to enhance their effectiveness and provide additional benefits such as hydration and skin regeneration. Always use your better Judgement and or consult with your director before combining products or procedures.
