

Master Comparison: Professional Peel Systems

Category	Chrysalis™ Peel System	PRX Derm Perfection (PRX-T33)	BioRePeel
Main Acids	37% total blend: Mandelic, Glycolic, Salicylic, Phytic (+ enhancers like Resorcinol in ICONIQ™)	33% Trichloroacetic Acid (TCA), Kojic Acid	35% TCA, Lactobionic Acid (PHA), Salicylic Acid, Citric Acid, Tartaric Acid
Support Ingredients	Hydrators (HA, glycosaminoglycans), barrier lipids (Phyto sphingosine), antioxidants (ferulic, green tea, aloe, fruit extracts)	Hydrogen Peroxide (buffers TCA, prevents frosting, stimulates healing)	Amino acids (glycine, arginine, proline, hydroxyproline), vitamins C & B2, Squalane, GABA
Depth of Action	Medium-depth; customizable via ICONIQ™ vs NEOTHESIS™ ratios	Medium-depth stimulation (non-frosting, no visible peel)	Medium-depth; exfoliation + dermal stimulation
Primary Mechanism	Multi-acid resurfacing + hydration + barrier repair + antioxidant protection	Collagen bio stimulation via TCA/H ₂ O ₂ synergy, with minimal surface damage	TCA exfoliation + antioxidant, amino acid, and vitamin complex for regeneration
Skin Concerns Targeted	Acne, congestion, pigmentation, photoaging, dehydration, uneven tone, redness/sensitivity	Laxity, fine lines, scars, photoaging, pigmentation	Aging, acne, pigmentation, fine lines, dehydration, barrier repair
Downtime	Minimal–moderate depending on customization	Minimal (no visible peeling, no frosting)	Minimal–moderate (may show light flaking/peeling depending on skin)
Customizability	High – clinician adjusts ICONIQ™ vs NEOTHESIS™ based on patient	Low – standardized protocol	Moderate – one formulation, but broad-spectrum actives
Barrier Support	Strong – multiple hydrators & lipids	Limited – focus is on collagen stimulation	Strong – squalane, lactobionic acid, amino acids provide repair

Category	Chrysalis™ Peel System	PRX Derm Perfection (PRX-T33)	BioRePeel
Antioxidant Protection	Ferulic, phytic, green tea, fruit extracts	Kojic Acid (brightening, mild antioxidant)	Vitamin C, B2, lactobionic acid, squalane
Best Suited For	Versatile: acne-prone, sensitive, dehydrated, uneven tone, early aging	Clients seeking firmness, wrinkle/scar improvement, and pigment correction without downtime	Clients wanting anti-aging + acne + hydration with TCA strength and antioxidant support
Considerations	Requires careful customization to avoid over-peeling; multiple actives = higher ingredient load	Limited barrier/hydration support; mainly anti-aging/collagen focus	May cause mild peeling; broader ingredient profile means higher risk for sensitive skin

Key Takeaways

- **Chrysalis™** → *Versatile, customizable, multi-acid system*. Balances exfoliation with **hydration + antioxidant + barrier repair**, making it adaptable for many skin types including acne and sensitivity.
- **PRX-T33** → *Collagen stimulator*. Uses TCA/H₂O₂ synergy to **firm and revitalize** with **virtually no downtime**, but less versatile for acne or hydration.
- **BioRePeel** → *TCA with repair & antioxidant complex*. Combines exfoliation with **amino acids, vitamins, and squalane**, making it a good “all-rounder” for aging, acne, and hydration, though flaking/peeling may occur.
